Napoleon's Light Infantry

Organisation

In common with many 18th-century armies, France had formed light infantry corps as early as 1743-44, but until the 1780s these troops existed only as either volunteer corps adapted (at least in theory) as skirmishers, or as part of units organised on a 'legion' basis, comprising both light infantry and light cavalry within a single corps. These 'legions' or corps mixtes were broken up in 1776, the companies of chasseurs (light infantry) remaining in existence until 1778. In 1784 the 'mixed corps' were re-established, in the form of six battalions of chasseurs à pied attached to six regiments of chasseurs à cheval, each battalion comprising four companies of six officers and 79 chasseurs each. In 1788 the chasseurs à pied were again separated from the cavalry, and increased to 12 battalions, named (in order from 1 to 12 respectively) Chasseurs royaux du Dauphiné, royaux de Provence, royaux Corse, Corses, Cantabres, Bretons, d'Auvergne, des Vosges, des Cévennes, des Gévaudan, des Ardennes and du Roussillon. Each battalion comprised four companies, each of six officers and 102 men, increased in wartime by 21 men per company.

On 1 April 1791 the chasseurs à pied were re-organised, with regimental titles abolished but numbers retained as before, except that the old Chasseurs royaux de Provence became the 1st corps and the old Dauphiné the 2nd. Under the new organisation each battalion comprised eight companies,

each of a captain, a lieutenant, a sous-lieutenant (second-lieutenant), a sergeant major, two sergeants, a corporal-fourrier (quartermaster corporal), four corporals, four appointés (junior NCOs), six carabiniers, 40 chasseurs and a drummer. Battalion staff consisted of two lieutenant-colonels, a quarter-maitre trésorier (paymaster/quartermaster), an adjutant-major, an adjutant, a surgeon-major, a drum-major, a tailor, an armourer and a shoemaker. Throughout the period light infantry retained their own terminology, the terms chasseur and carabineer equating with those of fusilier and grenadier respectively in the Line, though their roles were identical.

In April 1792 each company was increased to a total of 130 men, including four sergeants, eight corporals, eight appointés, eight carabiniers and two drummers. In the field it was usual to unite the carabiniers into a special company, usually ranking as the battalion's first. At this time also the number of battalions was increased to 14 by the incorporation in the regular army of personnel from the old Paris National Guard. There were, in addition, corps of provincial light infantry, some of which were amalgamated with the 14 existing battalions in February 1793 when the Aligarn system was instigated, by which (under normal circumstances) each regular battalion was combined with two volunteer or conscript battalions to form a Demi-Brigade, the term 'regiment' being eschewed for political reasons. By January 1794 a total of 22 Demi-Brigades Légère existed, each of three battalions, each battalion comprising a company of carabiniers and eight of chasseurs. Two additional Demi-Brigades were formed in October 1798, and by September 1799 the number had risen to 26, each Demi-Brigade now of four battalions. In August 1800 there were 30 Demi-Brigades of three battalions each, but those numbered 3, 5, 8, 16, 18, 20, 25, 26, 28 and 29 reduced to two battalions each. In August 1801 there were 31, and in September 1803 (as for the Line infantry) the title 'regiment' was restored in place of 'Demi-Brigade', the full appellation '—Régiment d'Infanterie Légère' usually being contracted to '—Légier'.
assault, with column reserved for the approach and for charges against defended positions. These tactics were only effective with troops sufficiently trained to be capable of deploying when required. With the rapid growth of the French armies by the incorporation of untrained volunteers and conscripts by 1793, ordered manoeuvre had disappeared, with formations relying to some extent upon a wild rush inspired by revolutionary fervour, a ‘hellish tactic’ described by a French Royalist as ‘fifty thousand savage beasts roaring at the mouth like cannibals, hurl[ing] themselves at top speed’. The organisation of the Demi-Brigades, combining the steadiness and disciplined firepower of the centre (trained) battalion in line with the charges of the volunteers in column on either flank, presaged the classic French tactic of Poids mort which operated at all levels from battalion to division.

But firepower and impetus alone were not sufficient, and indeed in 1793–94 were not typical of the tactics of most French forces, which relied to a great extent upon advance in open order, en débandade, in which whole brigades were deployed in skirmish formation, harassing the enemy with musketry, and then often concentrating into some kind of order to rush their target. Such advances in

![Light Infantry Tactics](image)

though light infantry tactics formed one of the cornerstones of Napoleonic warfare, their employment was by no means restricted to Light regiments and could be adopted by virtually any formation; thus, from the early 1800s if not before, the distinction between Light and Line infantry was likely one of costume and tradition.

The French 1791 Manual specified that actions were to be fought by a combination of line and column, the line for fire-fight and the final stages of

![SUBORDINATION](image)

Coéssance à la loi
of skirmishers and hurling itself upon the wavering enemy. Although the opponents of the French also possessed light troops, sometimes in considerable quantities, the vital difference between the two systems was that their opponents continued to regard close-order alignment as the principal formation for infantry, and light infantry as mere auxiliaries.

With such numbers of skirmishers required, it was obvious that there were insufficient French Light regiments to fulfil the tasks required of them, thus it was usual for whole regiments of Line infantry to be deployed as skirmishers, while the Light infantry per se acquired the steadiness and discipline normally associated with the Line. This similarity was enforced by the composition of Light regiments, as mentioned above. The battalion elite companies equated exactly with those of the Line, the voltigeurs theoretically being the smallest and most agile men and the carabiniers being the largest and most steadfast. The establishment of voltigeur companies (some regiments had possessed sharpshooter or 'scout' companies before 1804) was intended to provide each battalion with its own open formation negated to some extent the ordered volley- and artillery-fire of their opponents and led some observers to believe that it was the major French tactic, and General Duhesne remarked that one can truthfully say that by the end of 1793 the French armies had only light infantry'. By the mid-1790s, however, French tactics had progressed a stage further, so that attacks were made by a combination of line, column and skirmishers which together marked the decisive modernisation of 18th-century tactics. This had, in some aspects, been the intention of the 1791 Manual. By about 1795 it was usual to detach as much as one-fifth of a division's strength to act as tralleurs (skirmishers) to harass the enemy with musketry, and to hold back the remainder to reinforce the skirmish-line if necessary or, if the combination of skirmish-fire and artillery bombardment had shaken the enemy, to deliver a mass charge by passing through the cloud

Colour of the 21st Demi-Brigade Légère, 3rd Bn., 1797 pattern, captured by the Minorca Regt. in Egypt. skirmish-screen to precede an advance or cover a withdrawal; but again, this was often a matter of theory, as on occasion whole battalions could be used as skirmishers to precede a brigade or divisional advance, in support of (or even in place of) the voltigeurs of each battalion.

Despite the diminishing difference between Light and Line regiments, a convention persisted whereby Light regiments were scattered throughout the various Corps of an army, as if they were the only ones capable of performing duty as skirmishers. A typical example is provided by the ‘Order of Battle’ of the French forces at Austerlitz, at which period some slight difference between Light and Line was still apparent.

I Corps: two Divisions of five Line regiments, with the 27th Leger acting as an ‘advance guard’.

III Corps: one infantry Division (2nd) composed of three brigades:
- 2nd Brigade: 33rd Line and remainder of 15th Leger.
- 3rd Brigade: 48th and 111th Line.

IV Corps: 1st Division: 10th Leger, 14th and 36th Line.
- 2nd Division: 24th Leger and five Line regiments.
- 3rd Division: 26th Leger, Tirailleurs du Po and Tirailleurs Corses (both light infantry), three Line regiments.

V Corps: Caffarelli’s Division: 13th Leger and four Line regiments.
- Suchet’s Division: 17th Leger and four Line regiments.
- Oudinot’s Division: detached elite companies of 2nd, 3rd, 12th, 15th, 28th and 31st Leger, and 9th, 13th, 58th and 81st Line.

From the above it will be seen that the French Light regiments were often supported by specialist light corps such as the Tirailleurs Corses, Tirailleurs du Po and similar units, such as the Chasseurs des Montagnes as used in the Peninsular War, these corps sometimes not being as capable of serving as Line infantry as the bona fide French Light regiments; the light troops of allied nations, similarly, were not as tactically synonymous with their own Line infantry.

The presence of Oudinot’s Division in the Austerlitz order of battle illustrates the practice of forming elite units by combining the grenadiers/caraibiners and voltigeurs from a number of battalions into one formation.

One marked difference from the Line infantry, however, was in the superior esprit de corps of the Light regiments, which ranked as senior to the Line and regarded themselves as such, an attitude of superiority reinforced by their different (and often more impressive) uniform, the theoretical difference in role, and supposed superior training. This superiority of esprit de corps led to many units adopting the equipment and élan of the light cavalry, their equivalents in the mounted branch of the French army.

Têtes de Colonne

The composition and equipment of the Têtes de Colonne (literally, ‘heads of column’, the band, sapeurs, ‘Eagles’ and their escorts) conformed to the details given in the companion title, MAA 143, Napoleon’s Line Infantry. The official establishment of

Pattern of jacket of the coloured ‘Egyptian’ uniform of the ‘Kleber Ordinance’, with the pointed cuffs generally restricted to Light units.
a regiment's musicians is exemplified by the 15th Léger in 1809. 58 drummers (40 chasseurs, 12 carabineers, 6 voltigeurs), 6 voltigeur cornets, a drum-major, a tambour-major, seven musicians and a chef de musique (for three battalions). In the 'prestige' Light regiments, however, it was usual to lavish large sums upon the regimental band; the official strength of a bandmaster and seven musicians was often exceeded, band strengths sometimes being as high as 30. The cost of maintaining so large a band (with additional musicians hired professionally, normally on annual contracts quite separate from regimental establishment) and clothing them in the exotic fashion exemplified by Plate E, sometimes took regimental funds to the verge of bankruptcy. In November 1807 Berthier was forced to issue an order forbidding the cost of a band to exceed one day's pay per officer per month.

Uniforms

The 1791 uniform
The 12 light infantry battalions established in March 1788 wore a uniform based upon that of 1780, with a dark green coat of infantry style, without pockets and with a yellow (jonquille) facing colour in place of the varied facings of the 1786 uniform. In November 1789 white breeches and waistcoat were specified in place of the earlier green or buff, and on 1 April 1791 new regulations were introduced which described the light infantry uniform at the outset of the Revolutionary Wars.

The coat (habit) was dark green, cut in the infantry style with horizontal pockets and white metal buttons bearing the battalion number within the loop of a hunting horn. Lapels were green, piped in the facing colour, collar, cuffs and cuff flaps were either of the facing colour or green, as in Table A (including the 13th and 14th Battalions formed in 1792).

Shoulder decorations were like those of the Line infantry: red, fringed epaulettes for carabineers, and for chasseurs shoulder straps of the coat-colour, piped with the facing colour. The waistcoat was plain white. Three styles of headdress were worn; for the chasseurs the fur-crested 'Talboton' helmet was specified, with its tricolour cockade adopted on 27

Colour: a) scarlet, b) ponguille, c) pink, d) crimson, e) white 'x' indicates items of the facing colour.

May 1790, and an imitation fur hand, as for the Line infantry, but again as for the Line, its issue was probably not universal. It was shabby and unpopular, its 'fur' crest sometimes no more than a laban 'sausage' stuffed with straw; the skull and peak were black leather, with metal reinforcing bands running up the sides of the skull. As for the Line, plumes were white with a facing-coloured tip for full dress, replaced by similarly coloured pompons for ordinary wear. As an alternative to the crested helmet the bicorne could be worn, as by the Line infantry, and was popular with other ranks as well as officers, while carabiniers could wear a fur cap not unlike that of the grenadiers of the Line, but not so high (29.8 cm as against 35.2 cm for the Line) and without a frontal plate, a distinction which persisted throughout the Napoleonic period. As specified by the 1786 regulations, light infantry were distinguished by their legwear instead of the ordinary breeches and long gaiters of the Line, the Light wore short gaiters extending only half-way up the calf, usually with the upper edge cut to resemble a 'Hessian' or hussar boot, frequently decorated with coloured lace and a tassel on the upper edge. Drummers by the 1791 regulations wore blue coats (which had been specified with the usual facing colours in 1788), decorated with lace of the 'Royal' crimson and white chain pattern.

From 15 January 1792 officers of all light battalions were permitted to carry sabres (as used already by battalions 6 to 11 inclusive), and on the same date their greatcoat was regulated to resemble that adopted at the same time by the Line, but of dark green instead of the Line's sky-blue, with a facing-coloured collar. An example of the 1791 uniform is illustrated in Plate A, a version worn by the Légion des Allobroges, one of the corps which existed outside the numbered sequence of regular regiments and which was organised in the style of the pre-1788 light units as a mixed corps of light infantry and dragoons.

The 1793 uniform

The creation of the Demi-Brigades in February 1793 was accompanied in the Line infantry by the establishment of a new blue uniform, based upon that of the old National Guard, volunteer and conscript units, and replacing the traditional white uniform of the old Royal army (though due to shortages of matériel and affection for the traditional colour, the white took some years to disappear). Similarly, the blue uniform was introduced for the light infantry in place of the previous green, but the distinctive features which remained the preserve of the Light regiments throughout the period were retained. Due to their elite status and consequently higher esprit de corps, it was more usual than in the Line for regiments to adopt non-regulation items, thus the 'regulation' details which follow were not universal for all regiments. Uniforms were further influenced by those factors affecting all French uniforms: shortages of equipment and clothing leading to the adoption of whatever was available and degeneration into a more or less vagabond appearance in the mid- to late-1790s. The variations on 'regulation' dress were sometimes occasioned by the necessity of having replacement uniforms manufactured on active service, sometimes from local cloth, when it was not possible to follow the regulations exactly. The lists of regimental details which follow demonstrate how these factors created many quite individual costumes.

The habit of 1793 was similar to that of the Line,
but with a distinctive cut, including lapels with the lower edges shaped to a point, and almost invariably lacking the buttons and dummy button holes present below the lapels of the line habit; these pointed-ended lapels were perhaps the most distinctive light infantry feature throughout the Napoleonic period. The habit was dark blue with dark blue lapels, cuffs and turnbacks, all piped white; the collar and rectangular cuff flaps were scarlet, piped blue (or white), the flags bearing three (or occasionally four) buttons. Other patterns of cuff were common, either the flapsless variety with vertical piping as borne on many infantry coats, or pointed cuffs adumbrating the 1812 regulations. Turnback badges were in the form of white hunting horns, or red grenades for carabiniers; buttons were brass and pockets vertical, edged with white piping, with the style known as a la Soubise used on occasion.

Among many variations in common use were green epaulettes with or without red "crescents" worn by chasseurs instead of infantry-style shoulder straps; carabiniers retained their red epaulettes. Waistcoats were blue, often with white piping (including edging to the pockets), and legwear was styled as before dark blue breeches with short gaiters usually cut to resemble hussar boots. Officers' distinctions were like those of the Line (see below), but they usually wore hussar boots (bottes à la hongroise) matching the gaiters of the other ranks. Headdress was varied, the crested helmet being replaced by the bicorne (but perhaps persisting in use for some time), which resembled that worn by the Line, including the use of drooping horsehair plumes; but other styles included early shako or mirliton, and even busbies styled on those of the light cavalry with whom the light infantry retained great affinity. Examples of these variations are noted below.

In July 1799 a specification noted the use by light infantry of the habit-veste, a short-tailed jacket considered by several European armies as being more suitable for the skirmishing and rapid movement in open order expected of light troops, without the cumbersome long tails of the infantry habit. The short-tailed habit-veste was in common use by the Light units from this time, though officers usually (but not invariably) retained the long tails of the earlier habit.

The 'Egyptian' uniform

The Demi-Brigades Legeres which accompanied Napoleon's Oriental expedition changed their uniform at the same time as the Line infantry (see MAA 141, *Napoleon's Line Infantry*), adopting the peaked leather cap (casquette à pouf) with a folding neck flap and pompon or tult (pouf) on top, as introduced in the autumn of 1798, with a single-breasted short-tailed jacket and loose trousers. Unlike those of the Line, which had red collar and cuffs and white turnbacks, these jackets for the Light infantry were blue throughout, with cuffs cut to a point instead of the round-topped cuffs of the Line (except the 88th Demi-Brigade, which had pointed cuffs). Carabiniers wore red epaulettes, blue shoulder straps being prescribed for chasseurs, though many probably retained their green epaulettes; the buttons were often made of wood and covered with cloth, metal buttons being in short supply. With the introduction of the so-called 'Kleber Ordnance' in the autumn of 1799 (which ordered the regiments in Egypt to wear multicoloured clothing as a way of overcoming shortages by making up whatever cloth was available), the
light infantry Demi-Brigades concerned adopted the colour schemes shown in Table B. A recorded alternative of the 4th, of brown collar, cuffs and turnbacks, may represent crimson, faded by the sun; the 21st's yellow facings were not universal due to shortage of suitable cloth, aurore (pinkish-orange) and later pink being substituted. During this campaign the ranks of the 21st were filled with Negro slaves, bought by Kléber from Abyssinian slave-dealers.

The pre-1812 uniform
The light infantry uniform worn before the 1812 clothing regulations came into effect was a gradual evolution from the 1793 uniform. The habit-preste remained largely unchanged in basic cut (excepting the cuffs, which varied), though it appears that in some cases the tails of the short coat were extended to mid-thigh about 1809–10, at least for some regiments (e.g. the 2nd, 12th and 16th Légier), and from c. 1809 the turnbacks were extended to the bottom edge of the skirts. Officers in most cases retained the long-tailed habit, with pockets à la Soubise normally confined to officers and some NCOs and all apparently unofficial, there being no reference to such a style in regulations. The coat remained dark blue, with scarlet collar and cuff flaps, pointed cuffs, as worn by some regiments, were either blue or scarlet. Piping was white, with turnback badges in the form of white or red hunting horns (red grenades for carabiners). Buttons were white metal, bearing a hunting horn and regimental number, though at the beginning of the Empire period some regiments (the 2nd, 3rd, 4th, 8th, 9th, 12th and 28th at least) had brass buttons and accoutrements (as specified in 1793 and probably retained). Chasseurs should have worn blue shoulder straps piped white, but, as before, frequently used green epaulettes with or without red 'crescents'; carabiners retained their red epaulettes.

The dark blue waistcoat (often double-breasted at this period) had white piping in some cases.
ised for use by light infantry. Examples of similar headdress had appeared before that date, usually imitating light cavalry style and probably originating with the mirliton cap with a cloth ‘wing’ which could be wrapped around the body of the headdress, with a peak added to turn it into an early shako. The 1804 shako resembled the mirliton closely, excepting the absence of a ‘wing’, it widened only slightly towards the top, but had a detachable peak set not on the very lower edge but a short way up the body of the cap, fastened by hooks and eyes. Officially the shako was quite squat (17.8cm high) but contemporary pictures suggest that taller versions existed. The cap was constructed of black felt with leather upper and lower bands and peak, though examples are known made of leather throughout, as in the 1st Léger. It was ornamented with a brass badge of hunting-horn shape on the front, though contemporary illustrations suggest that this was frequently omitted. The tricolour cockade was carried at the left hand side of the cap, secured by a loop of yellow (or orange) lace with two buttons. Green cords with pendent ‘raquettes’ were suspended around the cap, and a plume was worn at the left side, sometimes this was of the upright cut-feather variety, but more often of the drooping kind, coloured dark green for chasseurs and scarlet for carabiniers. Carabinier shakos were sometimes ornamented with scarlet upper and lower bands and either scarlet or white cords, a recorded carabinier shako plate is in the form of a hunting horn surmounted by a grenade. For parade and combat carabiniers could wear the fur cap as described previously, without a plate and with red plume and red or white cords, and a rear patch like that of the Line grenadier cap, officially quartered red and blue and bearing a white lace cross, but other varieties existed. Fur caps were normally given to any regiment which requested them from Napoleon (as 1st Consul and Emperor), for example, the 2nd, 4th and 21st Léger received theirs under the Consulate, the 27th Léger in December 1804 and the 5th Léger in February 1806. Shakos are sometimes depicted with both plume and cockade fixed at the front instead of at the side, as the peak was detachable and plates frequently absent, with a minimum of adaptation the cap could be turned around and the peak affixed wherever desired, by those regiments wishing for a degree of individuality.

(though white waistcoats were not uncommon in summer); and the earlier style of legwear persisted—usually blue breeches and short black gaiters cut to resemble hussar boots, often with lace edging at the top and a small tassel, red for carabiniers and a mixture of red, white and/or green for chasseurs. Some regiments used white linen gaiters in summer, and on campaign loose trousers were common, either dark blue (for winter) or white, buff or light grey-ochre (for summer), worn over the gaiters. As in the Line, all manner of modifications were employed on campaign, out of necessity or utility, including the use of clothing made locally, such as the ubiquitous brown trousers worn in Spain, made from the undyed wool of the local sheep.

On 26 October 1801 the first shako was author-
in their dress, thus displaying plume and cockade at the front.

The establishment of volageur companies in 1804 introduced new uniform distinctions in the form of a chamors collar (piped red or white), and occasionally other alterations to the facings such as yellow or chamors cuff flaps or pointed cuffs. Their epaulettes were combinations of yellow, green and/or red, with garter tassels in the same colours; yellow hunting horns were borne on the turnbacks, and their shakos (sometimes with yellow bands) had white, yellow or green cords and plumes in combinations of yellow and red or yellow and green. Some volageur companies emulated the light cavalry to such an extent that they adopted the busby, usually with a yellow bag, much rarer were busbies worn by carabiniers, with red bags and plumes. Red piping was used by some elite companies.

Officers' uniforms were similar to those of other ranks, but with long coat-tails, short-tailed jackets were not unknown but may have been restricted largely to volageurs. Officers' buttons and turnback badges were silver, and their silver lace epaulettes like those of the Line, as specified in the 1786 regulations: colonel—bullion fringes on both shoulders; major (rank created in 1803)—as colonel but gold lace straps, chef de bataillon—as colonel but fringes on left shoulder only; captain—silver lace fringes on left shoulder only, capitaine adjutant-major—lace fringe on right shoulder only; lieutenant—as captain but with a red stripe on the strap, sous-

Light infantry embarking on campaign. German print of c.1806, showing shakos with plume and cockade on opposite sides.
silver lace edging but often with only a silver cockade loop and tassels. Breeches were dark blue, occasionally laced with silver, and boots usually of hussar pattern with silver edging and tassels, though mounted officers wore riding boots. On campaign officers often wore the single-breasted dark blue suerteau with a bicorn hat, and frequently overalls of light cavalry style. Similarly, sword belts were often of light cavalry pattern, instead of the regulation white leather shoulder belt, waist belts were popular, sometimes passing behind the flap of the breeches but alternatively displaying an S-clasp or rectangular plate, usually silver, and sometimes bearing gilt hunting horns or other devices. Waist belts existed in white or black leather, though green with silver lace or wire edging was equally popular. From the waist belt the sword could be suspended either from a frog or from cavalry-style slings, the latter most common when the sabre was carried.

NCOs wore the same system of ranking as for the Line, though corporals’ rank bars were usually of white lace, and long-service chevrons of red. Sergeants and above had rank bars of silver lace upon red backing, silver trimming to the turnback badges and epaulette straps, and silver lace intermixed in epaulette fringes, shako cords and sword knots, and occasionally badges on the epaulette strap, such as silver grenades for carabiniers.

In other matters of dress, the minutiae of stocks, cravats, gloves, forage caps, hair dressing, etc., the Light infantry resembled the Line. In April 1806 the first issue of greatcoats was made, these being beige in colour; prior to this date, overcoats had been provided either by the individual or from regimental funds, in a variety of styles.

The first major change in the Light infantry uniform of the Empire period was the adoption of the 1806 shako, which was introduced for all infantry and in general use by the following year, however, it is likely that the previous Light infantry caps with detachable peaks were retained for some considerable time, and as in every other item of uniform there were many variations upon the official regulation. The 1806 cap had a black felt body with black leather upper and lower bands and sometimes a leather chevron as extra strengthening on each side (these latter were usual for Line infantry but apparently rare for the Light). The cap
was issued initially without chinscales, but these were frequently added unofficially some time before their authorisation, in white metal with circular bosses bearing a hunting horn, or a grenade for carabiniers. At the front of the shako was a tricolour cockade and below it a diamond-shaped white metal plate, officially bearing an embossed eagle with the regimental number below, with a hunting horn added in some cases (especially for voltigeurs), though many regimental variations included the use of brass plates by the 8th, 17th and 26th. Plumes, worn at the front from 1806, gradually went out of fashion, and at this period were almost invariably of the upright style, though examples of the old drooping type occur in contemporary pictures as late as c.1807. Plumes were red for carabiniers, green or green with red tip for chasseurs, and green and yellow or yellow and red for voltigeurs, however, they were often replaced by coloured pompons (sometimes with tufts) in similar colouring. Shako cords remained red for carabiniers and

Cuff designs, the first two common to Line as well as Light infantry. Left to right: Flapless cuff, with method of opening; flapped cuff, with method of opening; cuff-design of the 1812 light infantryhabit-rest.
usually white for the others, chasseurs only rarely being depicted with the earlier green cords. As in the Line infantry, shakos were frequently covered on campaign by oilskin or linen.

A new shako was authorised on 9 November 1810, slightly taller and more robust than that of 1806, without the side chevrons and with chin scales, which many regiments had already adopted. Cords and plumes were abolished officially but this order seems to have had limited effect, especially among elite companies. Officers’ plumes were white (colonel), red-over-white (major) or red (chef de bataillon), with shako lace varying with rank, and pompons were worn by other ranks, as before. The 1810 shako plate consisted of a white metal diamond bearing an embossed hunting horn with the regimental number in the loop (a grenade and number for carabiniers), but again many regimental variations are recorded: the 17th retained their brass plates, for example, and another style consisted of an eagle atop a crescent bearing the regimental number, adumbrating the 1812 pattern.

The minutiae of regimental uniform varied even within the same corps; variations on the regulation dress might be adopted for only a brief period or even by a single battalion of the whole, either from necessity or at the instigation of a colonel or chef de bataillon. Examples of regimental variations are noted below, though it is possible that a uniform recorded by a contemporary observer may not have been typical of the whole unit, and might conceivably represent a single costume worn on campaign by reason of necessity or personal preference.

1st Léger c.1804-05 chasseurs and carabiniers, red pointed cuffs edged white. Chasseurs, green epaulettes and upright side plume, brass hunting horn shako badge; see Plate B. Officers’ shakos with black bands, silver lace. Voltigeurs, yellow or chamois collar and cuffs; green epaulettes with yellow crescents, green plume and cords, shako badge as for chasseurs. Voltigeur officers, silver upper shako band, badge and cords, cockade at left with no loop. Carabiniers,
2nd Léger: Drawings made by French PoW dated 1814 and depicting uniform of c.1808–09 show Chasseur, shako with white metal lozenge plate, white cords hung diagonally right to left, red plume with green base, red epaulettes with green fringe, green garter ornaments, red sword knot with green strap and fringe. Carabinier bearskin with diagonal white cords, red plume, epaulettes, garter lace and sword knot. Voltigeur as Plate F. Voltigeur shown c.1810–12 with yellow plume with red base rising from yellow ball, white metal eagle shako plate and chinscales, yellow cords and upper and lower shako bands, yellow collar piped red, red epaulettes with yellow crescents, red three-pointed cuff flaps piped white, yellow sword knot with yellow strap and fringe, yellow garter lace and yellow tassel with red knot.

3rd Léger: Pictures drawn in Luneburg 1807–08 show a carabinier in a brown fur cap with red plume and white cords; voltigeur and chasseur both with white hunting horn turn-back badges and sword knots, and archaic-looking, almost cylindrical shako with black leather upper and lower bands, white cords and lozenge plate; voltigeur with yellow-tipped green plume, green epaulettes with yellow crescents; chasseur with green epaulettes with red retaining strap, green plume, and instead of a cockade on the shako a curious, flat pompon or padded disc, red with green edge. All have red cuff flaps with four buttons, and gaiters cut to a point at front and back, but no trimming. Carabinier drummer shown with the same shako but minus a plate, with a frontal cockade secured by a red lace loop, red pompon, and cords hung diagonally from top right of cap; blue coat with crimson collar and lapels piped white, red epaulettes and piping to top edge of cuff; blue waistcoat piped white, gaiters as before but with red lace and tassel; brown fur drum-apron, brass drum with tricolour hoops. All have short queues and lightly powdered hair.

4th Léger: 1810 shako plate bore a hunting horn with numeral ‘4’ below, instead of within the loop of the horn.

5th Léger: 1806 shako plate bore an embossed, crowned eagle with a large hunting horn superimposed, with ‘5’ on a disc below. Voltigeurs at this period had yellow collars piped red, green epaulettes with red crescent, yellow-tipped green plume.
and upper and lower shako bands (upper band silver for NCOs), red sword knot with white strap and yellow fringe, yellow garter lace with yellow-fringed red tassel.

8th Léger c 1800, white metal eagle-on-crescent plates and chinscales. Chasseurs, white shako cords and garter lace, green pompon, blue shoulder straps piped white Carabiniers, shakos with red upper and lower bands, plume and cords; red garter lace, red epaulettes with white crescents. Voltigeurs, yellow upper and lower shako bands and cords, red-tipped yellow plume, yellow epaulettes with red fringe, yellow garter lace with red tassel knot, yellow fringe.

9th Léger Voltigeurs c 1804–06 as Plate C, including yellow cuff flaps, brass-scal ed epaulettes with red crescent and green fringe, and blue breeches with white vertical piping on edges of front flap. Otto MS shows carabiners c. 1807–08 in fur caps, officers' as Plate D, with silver diagonal cords from top right, red rear patch with blue cross, encircled with silver lace, carabinier's cap similar but white cords hung from top left to bottom right Officers' cap flaps bear four buttons, but carabinier and chasseur have three-pointed flaps piped blue, with only three buttons, white waistcoats Carabinier, red sword knot, red epaulettes with white crescents; chasseur, green epaulettes with red crescents, red sword knot with green strap and fringe, 1806 shako with brass lozenge plate, red-tipped green plume over green hall, white cords and cockade loop. Gaiters cut in a point at the front, edged white, carabinier with red tassel, chasseur red tassel with green fringe. Officers of the 9th had the distinction of carrying sabres like those of the Imperial Guard Chasseurs.

10th Léger Zimmermann shows officer c 1808 as Plate D. c 1809, blue pointed cuffs piped white, white metal eagle-on-crescent plate, white cords; carabinier, red plume and garter lace, brass-scal ed epaulettes with red fringe; chasseur, green pompon and garter lace with red knot, green epaulettes with red crescents; voltigeur, yellow-tipped green plume, green garter lace, yellow collar piped white, brass-scal ed epaulettes with green fringe.

12th Léger: Chasseur c. 1810–12, white metal eagle-on-crescent shako plate and chinscales, white cords, red pompon with green tuft, red collar and pointed cuffs piped white, green epaulettes with red crescents, red sword knot with green strap and tassel, white piping to waistcoat and upper edge of round-topped gaiters.

14th Léger. Originally probably worn uniform of the old 'Légion Verte' (officially ter Légion des Francs de l'Ouest) from which the 14th was formed in 1798. Zix recording this worn in Switzerland in 1798–99: bicorn or chapeau à la Henri IV, brown coat faced sky-blue, red waistcoat, sky-blue breeches or white overalls, red epaulettes and plume lor carabiniers, green for chasseurs (see Plate A) 14th wore hussar mirlitons c 1804, with red 'wing' for carabiniers, sky-blue for chasseurs and buff for the 'scouts' who became voltigeurs in 1804 (see Plate B. Carabiniers left fur caps in store prior to 1805 campaign and never retrieved them, wearing instead shakos with red 'wing' wrapped around, edged white (shown
with black edge for officer), brass grenade badge on front, red plume, white diagonal cords from top right, red epaulettes with white crescents. In Corfu c.1808 'wings' were added to shako of other companies, sky-blue for chasseurs, yellow for voltigeurs, with plumes (apparently worn at the side) of green, and yellow or yellow-over-green respectively. Instead of habit-veste, white waistcoats commonly worn in Corfu, red collar and cuffs for carabiniers and yellow for voltigeurs; epaulettes may have been worn on the waistcoat, red (carabiniers), green with red crescents (chasseurs), yellow with green fringe (voltigeurs); white shako cords for all; see Plate C. Officers in Corfu shown with long-tailed, sky-blue, single-breasted surtout and huff breeches for undress, with ordinary epaulettes and shako. Officers' memoirs note that instead of the shako, breeches, shoulder belt and sword and hussar boots, it was usual for officers of the 14th to wear the bicorn, long trousers of various colours (often buttoned up the sides), sabre and waist belt, and either shoes or infantry boots with turned-over tops.

15th Leger: Voltigeurs c.1809, yellow upper shako band and cords, yellow-over-red plume over red ball, red epaulettes with yellow fringe, yellow sword knot and gaiter lace with red tassels.

16th Leger c.1806 carabinier shakos bore white metal grenade badge about six inches high; Zimmermann c.1806-07 shows chasseur in old-style cylindrical cap minus plate but with cockade at the front, green plume and gaiter edging, old-style flapless cuff in red, green epaulettes and red crescents, white-piped waistcoat. Carabinier shown c.1807 wearing 1801 shako with detachable peak, red upper and lower bands, cords, plume and three-pointed cuff flaps. Voltigeur, yellow upper shako band, white cords, yellow-tipped green plume over yellow ball, yellow collar and cuff flaps, green epaulettes with red crescents, red sword knot with green strap and fringe, yellow gaiter lace with green tassel. Chasseur c.1810 shown with white diagonal shako cords, green pompon, blue pointed cuffs piped white, white gaiter lace with green-fringed red tassel. In Spam, carabinier and voltigeur shown with blue pointed cuffs piped white, fur carabinier cap with red plume and white cords, white gaiter lace with red tassel, voltigeur, white metal eagle shako plate, diagonal white cords from top right, yellow-tipped green plume, yellow collar piped red, yellow epaulettes with green fringe, yellow sword knot with white strap, green fringe, white gaiter lace, yellow tassel with green fringe. Alternative version shows red piping to chasseur uniforms, green epaulettes with red crescents. Chasseur shown in campaign dress with covered shako and ochre baggy trousers (sarronets), three-pointed red cuff flaps, red piping, green epaulettes. Surgeon shown wearing bicorn with silver loop, white sleeved waistcoat with pink collar and cuffs worn over blue hussar-style waistcoat with pink braid.

17th Leger: 1806 shako plate brass elongated hexagon with embossed crowned eagle over '17'. 1810-style brass lozenge plate bearing only '17' perhaps worn before that date, brass chinscales. c.1808, white shako cords hung diagonally from top right, chasseurs, white-over-green plume over red ball, green epaulettes with red crescent and fringe, voltigeurs, yellow-over-green plume, brass scale epaulettes with green fringe, white gaiter lace with
yellow or green-fringed yellow tassel, officer with busby, silver-laced red bag, silver cords, voltigeur plume c.1809–12, white metal eagle-on-crescent shako plates or continued use of brass hexagon, brass chinscales, shako cords worn in normal fashion, Carabinier, fur cap, red plume and cords, or shako with red upper and lower bands, red epaulettes; voltigeur, yellow shako lace, green (or yellow) cords, yellow-over-green plume over red (or green) ball, green epaulettes with yellow crescents, yellow collar piped white (or red), yellow garter lace; chasseur, white shako cords, red-over-green plume (or green ball), green epaulettes with white, or red, crescents, white (or green) garter lace. One source shows orange cockade loops, officers’ upper shako band of black velvet bearing silver stars. Another source, c.1810–12, shows red pointed cuffs and turnbacks, chasseur with shoulder straps and red garter lace, voltigeur with red-over-green plume, red epaulettes, chamouli collar, green garter lace and green sword knot with red tassel.

23rd Léger: 1806 shako plate bore embossed crowned eagle over hunting horn with ‘23’ in the loop, above a letter ‘N’.

24th Léger Chasseur shown 1810 wearing white diagonal shako cord, lozenge plate, green pompon bearing white number ‘24’, green epaulettes with red crescents, the straps and crescents piped white.

27th Léger: Shako with green side plume over cockade secured by white loop, white cords, worn as late as c.1806–07. c.1809, white metal eagle plate and chinscales; chasseur, red-tipped green plume, white cords, green epaulettes with red crescents, white garter lace with red tassel, carabineer, fur cap, red cords and plume, gaiters as chasseur; voltigeur, yellow upper and lower shako bands and plume, yellow-tipped green plume over red ball, shoulder straps or green epaulettes with yellow crescents, white garter lace with yellow tassel; voltigeur officer, red cuffs with blue flaps, yellow collar, busby with silver-laced yellow bag.

31st Léger: Zimmermann shows a voltigeur sergeant and sapoer wearing the long-tailed habit, c.1808, with square-cut lapels (perhaps in error?), voltigeur with yellow-tipped green plume over yellow ball, green cords, silver upper shako band and side chevrons, green epaulettes with white fringe and crescents, green sword knot, and green garter tassels with yellow knot.
Têtes de Colonne
Uniforms of the regimental bands, usually dependent upon the whim of the colonel or committee, included some striking variations, with the less exotic examples usually including the shako with the white plume of regimental headquarters staff, officers’ habits with laced facings trefoil epaulettes, officers’ boots and swords. Drummers and cornets usually wore the uniform of their company with the addition of lace on the facings and often large ‘swallows’-nest’ wings worn below the company epaulettes. Recorded examples of musicians’ dress include

7th Léger c. 1809, chasseur drummer with ordinary shako, green pompon, red collar, cuffs, flaps and lapels with broad white lace, green epaulettes with red crescents, drum-belt bearing brass hunting horn badge over the stick holder, Voltigeur cornet similar, yellow shako bands, yellow-over-red plume over yellow ball, facings as before, yellow epaulettes with white crescent and red fringe, yellow collar laced white

8th Léger c. 1809, blue uniform with green collar, cuffs, lapels and turnbacks all laced silver/white, white-over-green plume over white ball, white shako cords, drum-major similar but silver lace and epaulettes, silver-laced waistcoat and breeches (Austrian knots on thighs), silver-laced bicorn with red-tipped white plume over tricolour panache, silver-laced red baldric with gilt plate. Negro musician shown with green shako with black bands, green-over-white plume. Drummer ‘company’ uniform but green collar, lapels and cuff flaps edged with tricolour lace

10th Léger Two recorded varieties, changed apparently c. 1809. Musicians, ordinary habit-veste with red collar, blue pointed cuffs and lapels with white lace, white trefoils, waistcoat, plume, shako cords, gaiter lace and Austrian knots on thighs; officers’ sword on shoulder belt. Drummers with company distinctions plus white-laced facings (including loops on lapels), and seven inverted white Vs on sleeve. Alternative uniform as above, but with sky-blue coat, waistcoat and breeches, sky-blue cuffs with red flaps, officers’ boots, seers same, but red collar, cuffs and flaps laced white. Drummers with ‘company’ uniforms as before, but without lapel loops, and sleeve chevrons of mixed red-and-white lace.

12th Léger, Chasseur cornet as Plate G; note that unlike ordinary chasseurs described above, cornet shown with blue cuffs and three-pointed red flaps, and wings, instead of epaulettes, all laced white.

14th Léger Musicians originally wore mabillons like other ranks, red ‘wing’, red-over-white-over-blue plume, green coat with red collar and cuff flaps, white piping and trefoils, officers’ boots. Later wore shako with wing attached as remainder of regiment, side plume coloured as before, ordinary coat with white lace edging to red collar and blue cuffs and lapels, red cuff flaps piped white.

15th Léger: 1805–07, band wore red coat, pointed cuffs, green collar, lapels, turnbacks and waistcoat all laced silver, silver trefoils, green breeches, officers’ boots, shako with silver lozenge plate, white diagonal cords, white plume over green ball; drum-major same, but double-width lace including Austrian knots on thighs, silver-laced bicorn, white plume over tricolour panache, drummers like
metal eagle plate and chinscales, diagonal cords, white plume, red coat, green collar lapels and pointed cuffs all laced white, white trefoils, green waistcoat and breeches, white gaiter lace, drum-major similar but silver lace and epaulettes, silver-laced bicorn, white plume over tricolour panache, silver-laced red baldric and waist belt with silver and gilt plates respectively. Voltigeur cornet shown in same uniform, but green plume tipped yellow, yellow epaulettes, yellow gaiter tassel with green fringe.

17th Léger. Two styles in use, until c.1807–08, musicians wore shako with red-over-white-over-blue side plume, white cords, sky-blue coat with red collar, cuffs, flaps, lapels and turnbacks all laced white, white trefoils, dark blue breeches, white gaiter lace, later with white plume transferred to front of cap, sky-blue collar and cuff flaps, drum-major same but silver lace, bicorn with red-over-blue plume. Other musicians wore ordinary uniform with red facings voltigeur cornet shown c.1807 with red collar, lapels, cuffs, flaps and turnbacks all laced white, and c.1808 with usual blue cuffs and chamois collar but still red lapels. Drummers similar, red lapels and red or blue cuffs, white lace, tambour-maître same, carabiner distinctions, red-plumed husby with red bag piped white. New band uniform of Polish style adopted c.1807–08, retaining red (crimson) and sky-blue colouring of previous uniform, but with yellow coat and czapka. Musicians wore same uniform as illustrated in Plate E but with shorter-tailed coat, white lace, crimson czapka cords and cuffs with yellow flaps piped white, white-over-green plume, white gaiter lace; czapka plate borne brass ‘17’ on white metal centre of brass ‘sunburst’.

27th Léger. Musicians c.1809, white metal eagle shako plate and chinscales, white cords and plume; sky-blue coat with crimson collar, cuffs, flaps, lapels and turnbacks, white lace, trefoils and waistcoat, sky-blue breeches, chef de musique same but silver lace (including upper shako band), crimson waistcoat. Two recorded versions of chasseur drummers as musician but green plume tipped red, with either green epaulettes with red crescents or crimson ‘swallows-nest’ wings; facings edged with tricolour lace, crimson diamonds edged sky-blue bearing sky-blue eagles, with alternate crimson triangles edged white, lace with sky-blue edging.
Sapeurs
As for the Line infantry, sapeurs' uniforms were usually styled on those of carabiniers, plus grenade and crossed-axes sleeve badges, apron, gauntlets, axe and case, straight-bladed sabre and carbin, with beards mandatory. Among recorded regimental variations are:

5th Léger: Red-plumed busby, red bag piped white; usual coat but yellow lapels piped red, blue pointed cuffs piped white, brass scale epaullettes with red crescent and fringe, white grenade-over-axes badge, white gaiter edging.

7th Léger: Red-plumed busby, red bag piped white.

10th Léger: Busby; red epaulettes with crescents edged white, red crossed-axes badge.

12th Léger: Busby, red bag and plume, red epaulettes and axes badge.

15th Léger: Busby, red bag and plume, white piping and cords, red coat faced sky-blue, white badges and epaulettes, scarlet crescents; Vanson shows sapeur minus apron, sky-blue waistcoat, grey trousers with red stripes, red cuffs with sky-blue flaps.

16th Léger: Kolbe (1806-07) shows a Wurttemberg-style uniform: blue coat with mauve lapels and cuffs, mauve collar and turnbacks bearing blue grenades, red epaulettes, mauve grenade-over-axes badge, blue breeches with mauve stripe, 1801 shako with red upper and lower bands, white metal eagle-on-crescent plate, red plume, white cords, black apron and gauntlets, green waist belt with fronetal pouch bearing white stitching. c. 1808-10, ordinary uniform, bearskin, red plume and grenade-over-axes badge, white cords, red piping on side of garters.

17th Léger: c. 1808, red epaulettes, lapels, gaiter lace, white grenade-over axes badge, red-plumed busby, white cords, alternative version shows ordinary uniform, red-plumed bearskin, white cords, brass scale epaulettes with red crescent and fringe, three red chevrons only on upper sleeves.

27th Léger: c. 1808, sky-blue coat faced crimson, bearskin, red cords and plume, white grenade-over-axes badge upon red chevrons on upper sleeve.

31st Léger: Zimmermann's sapeur, c. 1808, has busby with red plume, cords and bag piped white, red badges and cuffs, blue shoulder straps piped white breeches with white stripe.
Eagle-escorts
Details of 'Eagles', flags and their escorts as noted in MAA 141, Napoleon's Line Infantry, except that the Deuxième and Troisième Porte-Aigles usually wore carabinier uniform, with the usual pistol holster and halberd; Plate G illustrates a regimental variation of the 7th Leger, in which three silver chevrons are worn on the right arm, instead of the regulation four red chevrons on each arm specified in February 1808, altered to two red chevrons in March 1811.

The 1812 uniform
The so-called 'Bardin' regulations (named after the major responsible for their issue), introduced on 19 January 1812, reformed the Light infantry uniform as for the Line infantry, though in the same way the changes took months, even years, to come into effect; most of these changes were as described in the companion, MAA 141, Napoleon's Line Infantry.

The 1812 regulations introduced a short-tailed habit-veste with lapels closed to the waist, so that the traditional pointed-ended lapels disappeared; the coat was dark blue with dark blue lapels and pointed cuffs piped white, blue turnbacks, vertical pockets piped white, and red collar piped blue for all except voltigeurs, whose chamois collars were piped blue. Turnback badges were red grenades (carabiniers) and white (chasseurs) or yellow hunting horns (voltigeurs); carabiniers retained red epaulettes, and shoulder straps were officially dark blue piped white (chasseurs) and chamois piped blue (voltigeurs), but many retained their epaulettes. The blue breeches were worn with knee garters cut straight at the top. The 1812 shako was like that of the Line, carabiniers' shakos (officially replacing the fur cap) being 15mm taller than those of the remainder. Carabiniers and voltigeurs adopted shorter horscaur plumes (agrettes) of red and yellow respectively; chasseurs used flat, 'lentille'-shaped pompons like fusiliers of the Line infantry, in company colours (green, sky-blue, orange and violet), though the older pompons seem to have persisted. Shako of carabiniers and voltigeurs could have hands and side chevrons of scarlet or yellow respectively. Shako plate and chauscles were like those of the Line, but in white metal, with the plate having the regimental number pierced in the plaque below the eagle, within the loop of an embossed hunting horn. The 1812 waistcoat was like that of the Line, but dark blue with scarlet shoulder straps for carabiniers and chamois for voltigeurs. The 1812 habit-veste seems to have been in use by July 1813 for regiments in Germany. At the end of that year a shortage of smooth beige cloth caused other types of greatcoat to be authorised, of beige twill, or 'mixed' cloth of white with blue interwoven, together with black leather accoutrements instead of buff leather, which was more difficult to obtain.

As for the Line, officers' jackets had longer tails, and their shakos silver upper bands of width (20, 25, 30 and 35mm) according to rank, colonels with a 15mm band below one of 35mm, with this lower band (and epaulette straps) in gold for majors. Feather plumes were restricted to colonels, majors and chefs de bataillon as in 1810, others wearing their company plume or pompon. It is uncertain how much of the 1812 regulation dress was adopted by officers (many probably preferred the single-breasted surtout with scarlet or chamois collar for active service), but it is doubtful if certain of the 1812 provisions were ever common, for example the prescribed silver gorget with gilt Imperial arms, earlier patterns probably proliferating.

For musicians, the 'Imperial livery' regulated on 30 December 1811 was like that specified for the Line, and intended to standardise the multicoloured costume then in use. The single-breasted green uniform had a silver-laced collar for musicians (double lace for bandmaster and drum-major), and 'Imperial' lace for drummers (alternate green and yellow segments, the yellow bearing interwoven eagle and 'N'), sewn along on seams and as breast loops and sleeve chevrons. Unlike the Line, however, the musicians' uniform did not bear regimental facings, as blue did not appear well with the green; their facings (except scarlet) were usually green instead of the red used on Line uniforms. The 1812 regulations ordered that sabres-brayet were to be carried by musicians instead of the popular officers' epees, but many musicians (as privately-contracted regimental employees) seem to have considered the latter their right and continued to carry them.

As for the Line, numerous variations on the 1812 uniform are recorded, including the retention of the old cuffs 'blue with red flaps' by some (e.g. 7th Leger), though the new pointed cuffs had been used unofficially by others for years. Recorded variations
1: Chasseur, Legion des Allobroges, 1792
2: Chasseur, Paris National Guard, 1792
3: Carabinier, 14ᵉ Leger, 1798-99
1: ‘Voltigeur’, 14e Leger, c.1801
2: Chasseur, 1er Leger, 1804-06
3: Carabinier, 1801
1: Voltigeur, 9e Leger, 1806
2: Sergeant-major, Tirailleurs Corses, 1805
3: Carabinier, 14e Leger, 1808
4: Carabinier, walking-out dress, 1806
1: Captain, 10° Leger, 1810
2: Lieutenant of voltigeurs, 1809
3: Major, 6° Leger, 1810
4: Officer of carabiniers, 9° Leger, 1809
1: Drum-major, 17th Leger, full dress, 1807
2: Musician, 15th Leger, 1807
3: Chasseur drummer, 27th Leger, 1809
1: Sapeur, 8e Leger, 1809
2: Cantiniere, 15e Leger, 1809
3: Voltigeur, 2e Leger, 1809
1: Porte-Aigle, 7e Leger, 1809
2: Sergent Porte-Fanion, 8e Leger, 1809
3: Chasseur cornet, 12e Leger, 1810-12
1: Officer of chasseurs, 7th Leger, 1812-14
2: Voltigeur, 10th Leger, 1812
3: Fifer, 10th Leger, 1812
4: Chasseur, 1813
include the following details

5th Léger. Musicians c. 1813 wore 1812 pattern coat, green throughout, white collar-lace and piping, white trefoils, green breeches, officers’ boots laced white, white metal lozenge shako plate bearing ‘5’, white-tipped green plume over white ball. Drummers, ordinary (lapelled) blue habit-veste with ‘Imperial’ lace on red collar and in seven inverted ‘Vs’ on sleeve.

10th Léger. Shako large tricolour rosette on plate, with white loop, carabiniers, red upper and lower bands, red plume over red pompon, brass scale epaulettes, red crescent and fringe, voltigeur. All these details yellow, chamois collar piped white. Sapeurs, busby, red bag and plume, yellow collar and lapels piped red, carabinier epaulettes, yellow grenade-over-axes badge. Musicians, green uniform and breeches, red collar laced white, red-tipped green plume. Drummers, single-breasted 1812-pattern jacket but in dark blue, yellow collar, pointed cuffs, ‘swallows’-nest’ wings, blue shoulder straps piped red, white piping on cuffs, mixed red-and-white lace on collar, wings, as loops on breast and seven inverted ‘Vs’ on sleeve. Shako as before but yellow-over-sky-blue pompon. Fifer, lapelled habit-veste of sky-blue with yellow collar, cuffs, lapels, turnbacks and ‘swallows’-nest’ wings, all edged red-and-white lace, sky-blue shoulder straps piped red, sky-blue breeches, shako as drummer. Drum-major, ass fifer but silver lace, trefoils, knots on thighs, officers’ boots, busby with silver-laced yellow bag, yellow plume with sky-blue top, white shoulder belt with silver plate.

18th Léger. In Spain musicians wore green habits of Line style, with square-ended open lapels, white turnbacks and cuff piping, red piping on collar and lapels and three-pointed cuff flaps, white laced lapels and collar, green shako with white upper and lower bands, plume and cords, 1812 pattern plate, white breeches and waistcoat, green sword knot with red tassel; drum-major, busby with red bag, white plume over pompon coloured red-over-white-over-blue, silver epaulettes, red waistcoat, red silver-laced belt, silver-laced green breeches, red-laced officers’ boots. Voltigeur drummer as musicians, but company collar and epaulettes, yellow upper and lower shako bands and side chevrons, yellow cords, green plume. Musicians depicted in full dress (i.e. with plumes, etc.) but with baggy trousers made from brown Spanish cloth, the regiment’s blue cloth no doubt being saved for use as coats, as would be common on active service.

* * * * *

The Tirailleurs Corses

Though not part of the numbered light infantry regiments, the Corsican Tirailleurs were representative of a number of corps of non-French origin which were used as light infantry in the armies of the Empire, though in their case, the Tirailleurs Corses were sufficiently ‘French’ to warrant inclusion with the bona fide French light infantry.

In 1802 Napoleon decreed that a battalion of Corsican sharpshooters (volunteers from the Depts. of Golo and Liacone) be attached to the 3rd Drum-Brigade Légère at Antibes, and in May 1803 the Bataillon de Chasseurs Corses became the 3rd Bn. of the 8th Léger. Composed of one carabinier and eight chasseur companies, the battalion formed a voltigeur company in March 1804. In the following month it was granted autonomy as the Bataillon de Tirailleurs Corses, commanded by Napoleon’s cousin Philippe Antione d’Ornano, future colonel of the Imperial Guard Dragoons, and received an ‘Eagle’ on 5 December 1804. In 1809 the strength consisted of seven chasseur companies (total 493 men), 64 carabiniers, 80 voltigeurs, eleven drummers and two cornets, plus a depot company at Antibes. On active service from 1805 to 1810, it was reduced to six companies in September 1810 (in accordance with the restructuring decreed in February 1808), when upon an enquiry by Napoleon 60-odd chasseurs of non-Corsican birth were transferred to the 18th Léger to maintain the Corsican character of the corps. On 8 September 1811 the remaining 18 officers and 679 men were transferred to the 11th Léger when the Tirailleurs Corses were disbanded.

The original uniform of the Tirailleurs was apparently like that of the Light regiments (blue, red collar, white piping) but between 1805 and 1808 it is thought that green facings were worn (Plate C), extant clothing records confirming an unidentified (contemporary?) source copied by Quinto Cenni. By 1809 (according to the Carl
collection) the unit had adopted a most unusual colour brown coat and breeches of Light infantry style, green collar and cuffs, white piping, yellow epaulettes, white metal eagle shako plate, yellow shako bands and yellow-tipped green plume (chasseurs), yellow (voltigeurs) or red plume (carabiners). A further distinction was the use of a 'Corsican' cartridge box (giberne a la Corsie), which was worn at the front of the waist belt, with only one shoulder belt (over the right) supporting the combined sabre and bayonet frog.

**Weapons and Equipment**

The weapons and equipment carried by the Light infantry in many ways resembled those of the Line, as detailed in MAA 141, *Napoleon's Line Infantry*, e.g. the knapsack, cartridge box and belt, and the official impédimenta carried on campaign such as canteens, etc., remained standard virtually throughout the period, with only minor variations in design and measurement. In other respects, however, weaponry and equipment varied in accordance with the theoretically different role of Light infantry.

In 1786 the chasseurs were armed with sabre, bayonet and a musket which was some 54cm shorter than that of the Line, company officers also carried muskets, and all officers a distinctive sabre.

From this period equipment followed that of the Line, except that all companies were armed with the short sabre, which was generally restricted to the élite companies of the Line, Light infantry carried the sabre on a belt over the right shoulder (the cartridge box belt being over the left), with the bayonet scabbard carried in a combined frog with the sabre. Voltigeurs were armed with the sabre from their creation until a directive of 7 October 1807 ordered that in future the sabre was to be carried only by carabiners, NCOs and drummers, in fact, however, it appears that this order had limited effect, and that the majority of voltigeurs and chasseurs retained their sabres. Sword knots were usually red for carabiners, green with red trimming or green for chasseurs, and in combinations of yellow, red and green for voltigeurs. Illustrations of the post-1812 uniform suggest that some chasseurs at least had
ceased to carry the sabre, using a single shoulder belt to support the cartridge box and the bayonet scabbard in the manner of fusiliers of the Line.

The cartridge box was like that carried by the Line, but usually with a large brass hunting horn badge affixed to the flap, though regimental patterns existed, including the apparently common use of cartridge boxes without badges, or with brass grenades with or without horns for carabineers. On campaign white fabric covers were used as by the Line, bearing black painted horn and/or regimental, battalion or company identification.

Officers were armed and equipped like those of the Line, with waist belts popular in place of the shoulder belt, as already described, while many carried the épée of the Line, curved sabres were popular as they reinforced the 'light cavalry' appearance which many light infantrymen attempted to emulate.

Light infantry carried the ordinary musket of An IX/XIII pattern, with iron fittings and a white leather sling; some 151.5cm long (barrel 113.7cm), its calibre was 17.5mm and weight 4.375kg. However, it is likely that greater use was made of the An IX/XIII Dragoon musket than by the Line, in which it was restricted to voltigeurs, being shorter (141.7cm) and lighter (4.275kg) than the ordinary musket, it was considered more suitable for those whose duties involved (theoretically) more service as skirmishers and in open order. Some Dragoon-pattern muskets, carried by elite companies, had brass fittings instead of the usual iron.

\[\text{The 1804 model eagle finale for the battalion standard: the original model cast in solid bronze in six sections at the Thoinot workshops from the design by Chaudet. (Musée de l'Empéri)}\]

Regiments of Light Infantry

A brief résumé of the services of each regiment is listed below, names in capital letters indicate battle honours borne on the 1812 'Eagles', these restricted to actions in which Napoleon commanded. Due to the practice of battalions serving apart, it was possible for elements of a regiment to be in action simultaneously in, say, Germany and Spain. '1812' indicates to which Corps of the Grande Armée a regiment was assigned in the Russian campaign, and '1815' to which Corps of the Armée du Nord in the Waterloo campaign. 'Spain' refers to the Peninsular War in general, including service in Portugal and France.

\begin{enumerate}
\item 1st Léger: Spain (Gerona, Tarragona, Castalla); Germany 1813, France 1814; 1815, II Corps.
\item 2nd Léger: Austerlitz (detachment in Oudinot's Div.); Frilablan; Spain (Rohica, Vimiero, Corunna, Busaco, Sabugal, Fuentes de Onoro, Salamanca, Vitoria, Nivelle, Nive); France 1814 (Paris); 1815, II Corps.
\item 3rd Léger: Austerlitz (detachment in Oudinot's Div.); Eckmühl, Essling, Wagram; Spain (Gerona, Castalla); Germany 1813 (Lutzen, Bautzen, Leipzig); France 1814.
\item 4th Léger: Uen, Frilablan; Spain (Rohica, Vimiero, Corunna, Busaco, Sabugal, Fuentes de Onoro, Salamanca, Vitoria, Nivelle, Nive); Germany 1813 (Lutzen, Bautzen, Dresden, Leipzig); France 1814 (Champagné, Montmirail); 1815, II Corps.
\item 5th Léger: Wagram; Spain (Saragossa, Tarragona, Nivelle, Nive); Germany 1813 (Lutzen, Dresden, Leipzig).

15th Légé: AUSTERLITZ, ECKMühl, WAGRAM; Spain (Vimiero); 1812, I Corps (Smolensk, Borodino), Germany 1813; 1815, III Corps.

16th Légé: JENA FYLAU FRIEDLAND ESSENG WAGRAM Spain (Talavera, Fuente de Onoro, Albuer Alanbera, Vittoria, Nivelle, Nive), Germany 1813 (Lützen, Dresden, Leipzig), France 1814 (Champaubert, Paris).

17th Légé: ULM AUSTERLITZ JENA, ESSENG WAGRAM Spain (Saragossa, Fuente de Onoro, Salamanca, Nivelle, Nive); 1812, I Corps; Germany 1813 (Leipzig); France 1814 (Bar-sur-Aube, Arcis-sur-Aube, St. Dizier).

18th Légé: ULM, WAGRAM, Spain; 1812, IV Corps (Borodino, Berezina), Germany 1813 (Bautzen, Leipzig), France 1814.

19th Légé: Raised 1814; France 1814.

20th Légé: Vacant number

21st Légé: JENA ESSENG WAGRAM Spain (Fuente de Onoro, Albuer Alanbera, Vittoria, Nivelle, Nive, Toulouse); France 1814.

22nd Légé: WAGRAM 1812, XI Corps; Germany 1813 (Lützen, Bautzen, Leipzig).

23rd Légé: WAGRAM Spain, Germany 1813 (Lützen, Bautzen, Dresden, Leipzig), France 1814 (Champaubert, Montmirail, Paris).

24th Légé: ULM AUSTERLITZ JENA, FYLAU ECKMühl FRIEDLAND, ESSENG, WAGRAM 1812, III Corps (Smolensk, Borodino), Germany 1813 (Bautzen, Dresden, Leipzig); France 1814.
37th Léger Raised 1812 from reserve companies, Germany 1813

The Plates

At: Chasseur, Légion des Allobroges, 1792
This figure illustrates the original green chasseur uniform with crested ‘Tarleton’ helmet. The Légion des Allobroges was formed on 13 August 1792, comprising 14 companies of light infantry, three of dragoons and one of artillery, and was broken up in the following year. The cavalry wore the same

25th Léger. ULM, JENA, FRYLAND, ESSELING, WAGRAM Spain (Busaco, Fuentes de Onoro, Salamanca, Toulouse), France 1814.
26th Léger. ULM, AUSTRIE, JENA, FYLAU, ECKMühl, ESSELING, WAGRAM 1812, II Corps, Germany 1813.
27th Léger. AUSTRIE, JENA, FRYLAND, ESSELING, WAGRAM Spain (Talavera, Barrosa, Fuentes de Onoro, Tarifa, Vittoria, Nivelle, Nive); Germany 1813.
28th Léger. Austerlitz (detachment in Oudinot’s Div.); ESSELING, WAGRAM Spain (Fuentes de Onoro, Albuera, Badajos 1812, Vittoria, Nivelle, Nive).
29th Léger Raised 1811; 1812, IX Corps; Germany 1813.
30th Léger. Vacant number.
31st Léger Raised 1803; Austerlitz (detachment in Oudinot’s Div.); Spain (Gorunna, Busaco, Sabugal, Fuentes de Onoro, Salamanca, Nivelle, Nive).
32nd Léger. Raised 1808 as 33rd; disbanded and re-formed 1810, Spain (Gerona, Busaco), Germany 1813.
33rd Léger. Raised 1808, 1812, I Corps; Germany 1813.
34th Léger Raised 1811 from auxiliary bns. in Spain (Ciudad Rodrigo, Nivelle, Nive).
35th Léger Formed 1812 from Mediterranean Regt.; Germany 1813.
36th Léger Formed 1812 from Régt. de Belle-Isle; Germany 1813.

[A] Waist belt plate, officers of carabiners, as shown (for example) by the Otto depiction of the 9th Léger. (B) Cartridge box plate, the rear. (C) Cartridge box plate, voltigeur of Light infantry, 1805; similar plates were used by carabiners.
of the officers’ uniform was that the long tails bore vertical pockets, piped sky-blue, running the entire length of the tails and each with seven equally spaced buttons.

B1. ‘Volteur’, 14th Léger, c.1801
This figure, pre-dating the establishment of voltigeur companies, represents the early ‘scout’ section of the regiment. As noted before, the 14th appear to have worn marlton caps; note also the four-button cuff flap. The ‘wing’ of the marlton was apparently retained on the shako of the 14th’s carabiniers, and was later adopted by the remainder of the regiment.

B2: Chasseur, 1st Léger, 1804–06
The chasseur illustrated wears the original shako with erect side-plume rather than the popular drooping variety; the pointed cuffs were a regimental distinction.

B3: Carabinier, 1801
Taken from a contemporary picture, this figure includes a number of variations on the ordinary uniform as that illustrated except for red-laced hussar boots and a cavalry sabre, and the artillery’s only distinction was white leather equipment.

A2. Chasseur, Paris National Guard, 1792
In 1789 the Paris National Guard comprised 60 ‘battalions’ (actually companies) organised in six ‘divisions’, each ‘division’ having a company of grenadiers and one of chasseurs. The latter wore shorter coats, blue breeches, light infantry gaiters and a girdle on to which hooked a brace of pistols; they were distinguished by green or green-over-white plumes, and turnback badges of a green hunting horn and a green boat, the latter the symbol of the city.

A3: Carabiner, 14th Léger, 1796–99
As described before, this figure wears the uniform of the old Légion Noire, apparently retained by the 14th Léger for some time, the chapeau à Henri IV is illustrated, but bicorns were also worn. It is possible that some examples of the Légion Noire’s original uniform were worn by the 14th, of similar colouring but single-breasted, with a ‘turn-down’ collar and round cuffs, in Austrian style. An interesting feature
uniform: the shako has the side decorations turned to the front (hence the unusual looping of the cords) with the peak re-affixed; the coatee has pointed cuffs and (unusually) three buttons below the right-hand lapel, as for Line infantry; the waistcoat is the popular double-breasted variety, and the breeches have a red stripe.

*Cr. Voltigeur, 9th Léger, 1806*

This regimental *voltigeur* uniform includes unusual yellow cuff flaps and a shako bearing the regimental lozenge plate; note also the piping on the front flap of the breeches and the double-breasted waistcoat.

The 9th Léger was known as *L’Incomparable* after heroic service at Marengo, Desaix falling at their head. Ney’s favourite regiment, the 9th was part of a brigade assailed by five times its own number of Austrians at Haslach, near Ulm: Gen. Dupont made an immediate attack; five times did the 9th Léger take and re-take Jüningen village with the bayonet, losing six ‘Eagle’-bearers in the process, which led Napoleon to remark that there was nothing which could shake this regiment. This was proven at Mohrungen in January 1807 when, surprised in winter quarters, the 9th was one of a number of regiments involved in furious hand-to-hand fighting, their ‘Eagle’ being lost and re-taken four times until finally lost, whereupon (in Napoleon’s over glorifying prose), the 9th, animated with an inconceivable ardour, precipitated themselves on the enemy and routed them and recovered their ‘Eagle’. In actual fact, the broken head of the ‘Eagle’ was found in a Russian ammunition waggon, was hastily re-mounted upon a hop-pole, and led the regiment in their successful counter-attack.
C2. Sergeant-Major, Tirailleurs Cosse, 1805
As noted before, this figure wears the conjectural green-faced uniform apparently in use between 1805 and 1808, the silver intermixing of the epaulettes and sword knot were distinctions of rank, like the sleeve bars. The shako cords are unbraided and hang at the front of the cap, a style not uncommon.

C3. Carabinier, 14th Léger, 1808
This figure wears the uniform already described, as used in Corfu, with the waistcoat replacing the coat, and the distinctive shako with wing attached.

C4. Carabinier, walking-out dress, 1806
The carabinier in tenue de ville retains the old shako with detachable peak, side-cockade and drooping feather plume; he wears long trousers and flimsy shoes, showing the stockings, and the white cravat, often with shirt-collar protruding above, used to enhance the appearance of tenue de ville but not allowed in other orders of dress.

D1. Captain, 10th Léger, 1810
This typical officers' uniform includes the popular green waist belt and sabre frog, and bicorn hat. Col Pouset of the 10th Léger typified the traditional
light infantry spirit of élan; when Gen Sainte-Hilaire was proposing to withdraw his brigade from a position scarcely tenable at Austerlitz, Pouset cried out, ‘General, don’t pull us back! Retreat one step, and we’re destroyed. There’s only one honourable way out—go bald-headed at whoever is in front of us, and above all don’t give the enemy time to see just how few we are!’ They did, and won. The 10th was not so fortunate at Eylau, however, blundering onto a Russian battery in the snowstorm, it was shattered by canister and immediately afterwards ridden down by Russian cavalry, virtually ceasing to exist in three minutes.

Dg: Voltigeur lieutenant, 1809
This officer wears the hussar busby lined by some voltigeur (and a few carabinier) companies, reinforcing the light cavalry appearance of the sabre and hussar boots.

D3: Major, 6th Léger, 1810
This figure wears the major’s rank distinctions of plume, and epaulettes with gold straps. The 6th Léger was the unit employed by Ney to lead the attack over the bridge at Elchingen; with the 69th Line they stormed the town in bitter street-fighting, so successfully that they won for Ney his title ‘Duc d’Elchingen’, and were specially paraded to witness Napoleon’s public congratulation of his marshal. At Durrerstein one of the Porte-Aigles of the 6th Léger, bearing his standard, joined Major Henriot of the 100th Line in his valiant but hopeless attempt to cut his way free from a host of Russians, as described in MAA 141, Napoleon’s Line Infantry.

D4: Carabinier officer, 9th Léger, 1809
As described before, Otto’s figure illustrates the carabinier cap with an unusual rear patch, red with a blue cross and encircled by silver lace, another peculiarity was that apparently the officers of the 9th at this period had four-button cuff flaps while the other ranks had only three buttons.

E1: Drum-major, 17th Léger, full dress, 1807
This shows the magnificent Polish-style uniform described before; the (presumably) Spanish artist ‘El Guil’ shows a modified service dress, with plume and cords removed, a white waistcoat and unlaced yellow breeches.

Officer’s saber flanked by two typical patterns of sabre, one suspended from the frog of a waist belt.

Many of the 17th seem to have been archetypal light infantrymen in their attitudes— one wrote of the Austrians in 1806, ‘I don’t know what to make of these people; they pray night and day, yet in this town there are nine hundred girls—who offer no resistance!’ A carabinier of the 17th raised Napoleon’s flagging spirits before Austerlitz. Passing the carabinier, a sentry, Napoleon muttered to himself that ‘Those Russian b----s think they can make us swallow anything’. ‘Not on your life!’ roared the carabinier, ‘not if we have anything to do with it!’ A similar attitude of defiance was exhibited by Corporal Andre Colomb, who led the escape of 88 men of the 17th from Spanish custody in July 1813, for six weeks the intrepid band, totally without supplies, made their way over the Pyrenees, fighting and evading recapture, until they rejoined their unit without having lost a man. Colomb was appointed a Chevalier of the Légion d’Honneur, and seems to typify Napoleon’s remark that every man carried a marshal’s bâton in his knapsack.

E2: Musician, 15th Léger, 1807
Oriental costume was adopted by the percussion
sections of some hands, if the musicians were of Negro or Levantine birth The man illustrated has a chapeau chinois or 'muling Johnny', an instrument hung with bells.

In the hand-to-hand fighting around Tellnitz at Austerlitz, the 15th (composed largely of young, untried men) lost their cohesion until chef de bataillon Dulong dismounted and held up the 'Eagle', crying, 'I stay here, let me see if you will abandon your Eagle and your commander' His leadership caused them to resume the fight, during which Sergeant-majors Brodues and Deschamps, each with a standard, used them as clubs. 'these two heroes each knocked down a number of the enemy by the weight of their Eagles, and thus managed to save these standards'

**E3: Chasseur drummer, 27th Léger, 1809**

This figure wears the distinctive sky-blue of the 27th's musicians

**F1: Sapeur, 8th Léger, 1809**

This figure wears a spectacular version of sapeur uniform, including the usual accoutrements of apron, gauntlets, axe and case, a straight-bladed sabre imitating an antique 'glave' with a brass cockerel-head pommel and, most unusually, a blunderbuss instead of the usual carbine carried by sapeurs Bushies were popular, to emphasise the light cavalry style of dress, and full beards were mandatory

**F2: Cantinieres, 15th Léger, 1809**

Most battalions possessed a mantonnière or cantinère, a souterain who accompanied the unit on campaign selling alcohol, food and other trinkets to supplement the men's rations. Often married to an NCO of the regiment, the cantinieres were usually adopted by the battalions as mascots, and earned all the respect accorded them. Accompanying the unit into action, the cantinieres performed countless acts of heroism, like those of the 26th Léger and 4th Line at Austerlitz, handing out cups of brandy and saying 'pay me tomorrow', in the knowledge that many of their customers would die before the debt could be repaid. Many cantinieres adopted their own design of 'uniform', and apparently in the 15th Léger this was styled upon that of the tête de colonne, universal accoutrements were the apron and decorated spirit harrel slung from a shoulder belt.

[Job drawing of a tombeau major of Light Infantry in the official Imperial Livery (left), and, far more interesting, a sabarlinia in full campaign dress and equipment. Note shako cover with a painted 'g' over a carbine grenade insignia; company epaulettes on the capote, together with service chevrons on the left sleeve; mess tin in the knapsack; what appears to be a life in a case slung on a cord; the double frog for the sabre and bayonet of elite company men and the pouch, with its small strap buttoning to the rear of the coat, its rolled fatigue cap underneath, and its white flap cover. Note also very loose campaign trousers at the ankle (National Army Museum)]
From a contemporary illustration, this figure appears to wear a version of the 1806 shako, without chin scales and with diagonal cords. It would appear that it was usual for all ranks at one time to wear moustaches and small 'Imperial' beards.

The independent spirit of the Light infantry, as exemplified by the 2nd Demi-Brigade Légère, could lead to conflict with other regiments, in 1798, for example, the 2nd was moved from Avignon to avoid open warfare between themselves and the 9th.

Demi-Brigade de Ligne, after the 9th's fencing-master had been killed in a street-fight.

A: *Porte-Argle, 7th Légère, 1809*

The *Porte-Argle* illustrated wears *carabinier* uniform and is armed with the pistols and halberd of his appointment, the latter for the 7th apparently having a plain red pennon. As noted before, the silver chevrons used by the 7th would appear to be a regimental variation upon the regulation rank-markings. The 2nd and 3rd *Porte-Argles*, veterans whose illiteracy alone had prevented their promotion to higher ranks, occupied the most hazardous position in the regiment, along with the other members of the 'Eagle'-escort: the 1st *Porte-Argle* (the lieutenant who bore the flag), two corporals and four *fourriers*. For the 7th, the 2nd and 3rd *Porte-Argles* in 1809 were *Carabinier* Bernard Desplat and *Chasseur* Corporal Jacques Durand, of 16 and 17 years' service respectively.
An example of the ferocity of the fighting which occurred around 'Eagles' is given by the 24th Léger at Austerlitz, where the regiment was caught by Russian cavalry and almost annihilated (126 killed and 364 wounded); the 'Eagle' was lost under a mass of falling bodies and only recovered the next day by the 4th Line while they were searching for their own 'Eagle', lost in the same disaster. The 24th's 'Eagle' was again lost in Spain, at Baylen; but it was rescued by Capt. Lanusse of the 24th, who escaped from a prison hulk at Cadiz, stole the 'Eagle' from where it was displayed as a trophy, and evaded capture until he rejoined the French army. Lanusse was promoted to chef de bataillon of the 8th Line as a reward, but in that capacity was slain by the British 87th at Barrosa.

G2: Sergeant Porte-Fammon, 8th Léger, 1809
Attached to the sergeant's musket is a famon, a company marker flag, these were of varied design. Here the green flag with yellow edge and central grenade badge apparently belonged to the 8th's carabiners, whose uniform the sergeant wears, including a non-regulation eagle-on-crescent shako plate.

G3: Chasseur Cornet, 12th Léger, 1810–12
Cornets (hornists) were not always restricted to voltigeur companies, except for the lace on the facings and the swallows'-nest wings, this figure wears a uniform like that of the ordinary chasseurs, though a companion illustration to that upon which this is based shows red pointed cuffs instead of the regulation type worn by the cornet. Though not in classic Light infantry style, round-topped gaiters were not uncommon.

H1: Chasseur officer, 7th Léger, 1812–14
The officer illustrated wears the 1812 regulation uniform, except that the earlier pattern of cuff has been retained in the new dress.

Epée of an officer of the 6th Léger, finely displayed on a green leather waist belt and frog with silver wire embroidery set in from both sides. Note the regimental escutcheon set into the grip. (Musée de l'Empereur)
**H2: Voltigeur, 10th Léger, 1812**

Excepting the shako, the voltigeur wears regulation 1812 uniform, though he has retained the second shoulder belt and sabre. The shako has no plate but a tricolour rosette on the front; carabineers wore the same cap but with red lace bands and plume.

**H3: Fifer, 10th Léger, 1812**

Though the uniform is in the cut of the 1812 regulations, it retains the unique regimental colouring with red-and-white lace; only the band of the 10th, apparently, adopted the green ‘Imperial’ uniform. The shako bears the same rosette as figure H2.

**H4: Chasseur, 1813**

This typical campaign dress includes the greatcoat (which varied in style, single- or double-breasted, from beige to tan to brown), with a red collar patch; loose trousers, covered shako and campaign equipment are worn. The man illustrated belongs to a regiment which has obeyed the order for sabres to be discontinued for chasseurs, the single shoulder belt supporting both the cartridge box and bayonet.
Apart from contemporary illustrations and extant items of uniform, the work of several later artists is recommended, including Lucien Rousselot (L’Armée Française), Albert Rigondaude (‘Rigo’), J. Onfroy de Bréville (‘Job’) and the illustrators of the Bucquoy cards, some of which are reproduced in Les Uniformes du Premier Empire: l’Infanterie (Cdr. E.-L. Bucquoy, ed. Lt-Col L.-Y Bucquoy and G. Devatour, Paris 1979); examples of ‘dress regulations’ are catalogued in Guide a l’usage des Artistes et Costumiers Uniformes de l’armée française (H. Malibran, Paris 1904, reprinted Krefeld 1972), while examples of unofficial insignia are recorded in Aigles et Shakos du Premier Empire (C. Blondieau, Paris 1980). Details of weaponry and tactics may be found in Weapons and Equipment of the Napoleonic Wars (P. J. Haythornthwaite, Poole 1979), The Art of Warfare in the Age of Napoleon (G. E. Rothenberg, London 1977) and The Campaigns of Napoleon (D. G. Chandler, London 1967). Interesting contemporary depictions of early light infantry dress may be found in Bonaparte et son Armée après Marengo (R and J. Brunon, Salon-de-Provence, n.d.).
Notes sur les manèches en couleur

A. Uniforme vert original et campagn en cuir des chasseurs. Tous les membres de cette unité, auxiliaire de cavalerie et d'infanterie, portaient cet uniforme à l'exception des bottes de cuir pour la cavalerie et des doublures de cuir bleu pour l'infanterie. A. Chaussons des troupes de la Garde Nationale de Paris, comprimant une compagnie de chasseurs. A. Le 1er Légère continua de porter pendant un certain temps l'uniforme de l'ancienne Légion Napoléon, notez le chapeau à la Napoléon IV.

B. Le manœuvre et la manchette à quatre boutons sont des caractéristiques du régiment. B. Le modèle original du chapeau était d'un plumet rigide et son motif était le rocaille. Les manchettes en cuir étaient une caractéristique du régiment. B. On découvrit un grand nombre de détails non réglementaires au cours de l'expérience. Des détails décoratifs, comme les lisières de la manchette en cuir bleu et le galon doré à l'intérieur, étaient réalisés à la main.

C. Notes sur le dos de la manche. Il est généralement admis que le dos de la manche est le plus intéressant. C. Les manchettes de cuir sont généralement considérées comme un élément de décoration.

D. Le chapeau et le collet de cuir vert caractérisent la tenue des officiers. D. Le collet de la manche fut porté par certains officiers de voltigeurs et de fantassins. D. Notez les insignes de chef de bataillon placés sur le dos de la manche. D. Le dos de la manche est un élément de décoration.

E. Le style de l'habit de l'officier de voltigeur est également de première importance. E. Le style de l'habit est généralement similaire à celui des officiers de voltigeurs. E. Le style de l'habit est un élément de décoration.

F. Exemple typique d'uniforme de saper. F. Le modèle typique d'uniforme de saper. F. Le modèle typique d'uniforme de saper est un élément de décoration.

An unexcelled source of information on the uniforms, insignia and appearance of the world's fighting men of past and present. The Men-at-Arms titles cover subjects as diverse as the Imperial Roman army, the Napoleonic wars and German airborne troops in a popular 48-page format including some 40 photographs and diagrams, and eight full-colour plates.

COMPANION SERIES FROM OSPREY

ELITE
Detailed information on the uniforms and insignia of the world's most famous military forces. Each 48-page book contains some 50 photographs and diagrams, and 12 pages of full-colour artwork.

WARRIOR

NEW VANGUARD
Comprehensive histories of the design, development and operational use of the world's armoured vehicles and artillery. Each 48-page book contains eight pages of full-colour artwork including a detailed cutaway of the vehicle's interior.

CAMPAIGN
Concise, authoritative accounts of decisive encounters in military history. Each 96-page book contains more than 90 illustrations including maps, orders of battle and colour plates, plus a series of three-dimensional battle maps that mark the critical stages of the campaign.
